FRONTEND & BACKEND WEB DEVELOPMENT

Vocational school graduates who are interested in programming technology and software, have experience to create and develop several frontend and backend web projects such as CSM articles and online stores, as well as internship experience as a frontend developer, always eager and very active in learning new technologies

---

SKILL & FRAMWORK

JavaScript	Git & Github	Nuxtjs
TypeScript	Postgres SQL	Happi Js
ReactJs	Express Js	Entity Relational Database

PROFESSIONAL EXPERIENCE

Zegasoft   **Nov 2023 - Present**
Frontend Developer intern
Create and develop an online web store called tokosync where when the client updates goods, the goods automatically update in several ecommers, and also some projects using typescript and also react js

Istana Computer   **Okt 2021 - Dec 2021**
technician
Working as a technician was part of an internship program at my school, repairing and identifying errors in leptop/PC client hardware and software devices, recording daily income and serving clients with hospitality

---

EDUCATION

Smk Hidayatul Mustofa
Teknik computer & jaringan

CERTIFICATE AND COMPETENCY

Dicoding
Menjadi Back-End Developer Expert
Belajar Fundamental Aplikasi Web dengan React

Alkademi
Bootcamp Online Sekolah Beta Intensif Hacker
Progressive Web Apps Menggunakan Nuxt JS

Pelatihan Vokasi Kilat (PESILAT) Fullstack-Develover

RECENT PROJECT

https://github.com/ikhsanmuhamad22

TOKOSYCN

Is a web that is made to help UMKM so that they can sell their products faster and more efficiently, the main feature is synchronization when they update goods can directly update to several ecommerce that is already available, this web is made using typescript and reactjs.

SHAREINGS-APPS

simple web to share posts I make using nuxtjs2 and tailwind css using some additional packages like nuxt/auth, toast, and sweetalert as well as for the backend side I use expressjs and prismaORM

PERSONAL-NOTES

is a web that I created to fulfill the submission of the dicoding academies of the React JS class created using React Vite and TailwindCSS, this web can help users to save, edit and delete notes as well as archive features, dark mode and search to help users, this web also provides authentication features so that users can create more than 1 note account

CMS RAGAM ARTICLE API

I made this project with my team, and the final project when I studied at the pesilat alkademi course. I fill roles as backend development features in this variety of articles are multi roles user, user menegement, article menegement and seo menegement, for tools and fremework that we use are nuxtjs 2, express, sequelize and mysql for the database, This is my first project so there is a lot of code that may not be efficient yet.

FORUM API

is an API that I created to fulfill the final submission of the course in dicoding backend expert, provides features to create threads to reply and also give likes, this project created using hapijs and postgresSQL and I also learned about clean architecture, unit testing using jest, CI CD with github action and deploying using EC2 AWS

OPEN MUSIC API

This project is a submission from learning backend fundamentals in dicoding academy, created using HapiJs and PostgreSQL SQL, this project is rich in features such as adding, editing, and deleting albums and songs etc, in this project I also learned Message Broker, data caching using Redis and many other features.
